

Multi Webpage Configuration /TOMCAT/ Jboss or WebServer.

Package : httpd

Port Number : 80

Config : /etc/httpd/conf/httpd.conf

Service : httpd

Document root : /var/www/html

Step by Step For WebPage

- Yum install httpd -y
- Cd /etc/httpd/conf
- ls -ltr
- vim httpd.conf → jump to last line (esc :\$) and then type

<VirtualHost <Your server ip Address>

ServerAdmin <HostName>

DocumentRoot <Where the Content Picked up>

ServerName <HostName>

</virtualHost>

- vim httpd.conf → inserted the above content
- cd /var/www/html
- vim index.html → add the content in the file
- Save the file
- Service httpd restart

Subpages:

- DocumentRoot /var/www/html → hompages
 - Alias <your name : eg chandrutech> /var/www/html/chandrutech
→ subpage content picked up
 - Mkdir chandrutech
 - Cd chandrutech
 - Vim index.html → add the content in the file
 - Save the file
- ❖ **Check in comment line mode:** wget "http:// <Your ip Address>
